NUCLEIC ACIDS RES. 17:3989-3989(1989).

-!- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION. NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

PROTEIN C AND MRNA.

EMBL; X15062; THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

```
PROTEIN TYROSINE + PHOSPHATE.
-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-!- TISSUE SPECIFICITY: EXPRESSED IN EVERY TISSUE EXAMINED.
-!- SIMILARITY: CONTAINS 1 PROTEIN-TYROSINE PHOSPHATASE DOMAIN.
-!- SIMILARITY: CONTAINS 8 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S LETT. 378:7-14(1996).
CATALYTIC ACTIVITY: PROTEIN TYROSINE PHOSPHATE + H(2)O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PS00383; TYR_PHOSPHATASE_1; 1.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Tabular output not generated. Fri Dec 18 18:39:23 1998; MasPar time 3.38 Seconds 629.739 Million cell updates/sec

Description:
Perfect Score:
Sequence: >US-08-951-733-14 (640-940) from US08951733.pep (2 of 2) 2214 940 Trom US08951733.pep (2 of 2) 1 TSRLRFIPKPDGLRPIVNMD......NLRKTVVNFPVEDEALGGTA 301

Scoring table: PAM 150 Gap 11

Searched: 77309 seqs, 7078906 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

Statistics: a-issued 1:5_COMB 2:PCT9_COMB 3:backfiles1 Mean 31.637; Variance 143.394; scale 0.221

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 39.946; Variance 185.025; scale 0.216

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TBRV gIII gene Fig. 3; 41pp; English. Fig. 3; 41pp; English. RMM = 54,621 dalton. It has features in common with envelope glycoproteins of other herpesviruses. The first 21 AAs are hydrophobic with the exception of Arg at position 6. This sequence could correspond to a signal peptide for membrane insertion and may well be removed during translation and transport. AAs at positions 481-498 are strongly hydrophobic and have the characteristics of a membrane-spanning region. The carboxy terminal 11 AAs have a basic charge and may function as a cytoplasmic anchor sequence. Four potential glycosylation sites are present in the region between the putative signal sequence and the transmembrane sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                  of a sequence comprising fragments of the coding sequence of the human neurofilament subunit NF-H gene corresponding to nucleotides 1-1162 of the wild-type NF-H gene. This region contains GAGAG motifs. Frameshift mutants of the tau, ubiquitin, apolioprotein E, microtubule-associated protein 2 (MAP-2), neurofilament subunit L, M and H and amyloid A4 genes are claimed. All these genes share a common GAGAN motif (N-A, G, C or T), which is the site of common GA dinucleotide deletion(s) that cause neurodegenerative disorders. Antigenic peptides used for the production of antibodies, and small nucleic acid sequences derived from frameshift mutants are used in the diagnosis, prevention and treatment of cancer and neurodegenerative diseases, e.g. Parkinson's disease, Alzheimer's disease, Down's supranuclear palsy (PSP), amyotrophic lateral sclerosis, Huntington's disease, multiple sclerosis, and other degenerative diseases such as Garuence 386 Ab.
                                                                                                                                                Matches
                                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               02-OCT-1996; IB1106.

The sequence encodes the prepro form of human osteogenic polypeptide-2 (h0P2-PP). The protein is useful as a subunit of osteogenic and xenogenic implants in mammals. When implanted with a matrix, the polypeptide locally induces the full developmental cascade of endochondral bone formation and bone marrow differentiation. This can be used for optimal predictable bone formation to correct, eg can be used for optimal predictable bone formation to correct, and countried or congenital cranofacial and other skeletal or dental and ental and periodontal applicns., and may be used for cartilage has dental and predictable bone formation fractures.

PT Treatment of chronic renal failure - using an osteogenic protein/bone morphogenetic protein renal therapeutic agent or protein/bone morphogenetic protein recells

PT morphogen or renal mesenchymal progenitor cells

PT morphogen or renal mesenchymal progenitor cells

CC This sequence represents the mouse osteogenic protein, OP-2. This sequence represents the mouse osteogenic protein and having, or at risk of, chronic renal failure which comprises administering an CC osteogenic protein/bone morphogenetic protein (OP/BMP) renal therapeutic agent or morphogen. The method can be used for treating e.g. chronic cagent or morphogen. The method can be used for treating e.g. chronic constant failure, end stage renal disease, chronic diabetic nephropathy, diabetic renal hypertrophy, hypertensive constant of the protein of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         """ repartosclerosis, hypertensive glomerulosclerosis, chronic glomerulonephritis, hereditary nephritis, renal dysplasia, or a patient afflicted with e.g. glomerular hypertrophy, tubular hypertrophy, glomerulosclerosis, tubulointerstitial sclerosis or renal fibrosis. Such therapeutic agents can prevent, inhibit or delay the progressive loss of functional nephron units and the progressive decline in glomerular filtration rate (GFR) which slowly but inevitably leads to the need for renal replacement therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PT Extraction of osteogenic protein from mixture - using antibodies
pr specific for novel polypeptide chains useful as subunit(s) of
dimeric osteogenic protein(s)
pr dimeric osteogenic protein, which is
cused in the present invention. The present invention describes methods
cused in the present invention. The present invention describes methods
cused in the present invention. The present invention describes methods
cused in the present invention of the protein opposite the mixture to an antibody that
protein comprises.

CC for selectively extracting an osteogenic protein opposite the methods op
comprises a pair of oxidised subunits that are disulphide-bonded to form
a dimer, and one of the subunits has an amino acid (aa) sequence
custificiently homologous to residues 335-431 of a 431 aa protein
cc designated OPS, sequence given in the specification. In dimeric form OP
cis capable of inducing cartilage and endochondral bone formation in a
methods are used for recovering the recombinant proteins from cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

PS Disclosure; Column 139-42; 129pp; English.

CC This sequence represents the murine osteogenic protein, mop-2. mop-2 the mop-2 protein can be used in the TGF-beta superfamily. Fragments CC of thee mop-2 proteins in the TGF-beta superfamily. Fragments CC of the mop-2 protein of antibodies with the penduction of antibodies with the penduction of antibodies are CC capable of binding specificities for osteogenic proteins. The antibodies are CC capable of binding specifically to an epitope of the osteogenic protein cand may be used in an implantable osteogenic device which allows predictable bone formation to correct acquired and congenital cranofactal and other skeletal or dental anomalies. They may be used to induce local endochrondral bone formation in non-union fractures and in other clinical applications including dental and periodontal applications where bone formation is required. Other potential applications include cartilage repair, e.g. in the treatment of osteograrthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

C The sequence is that of mouse osteogenic protein 2 (mpp-2) a
a morphogenically active protein which may be used as part of a
c method for treating a bone fracture or a disease which causes or
results in bone fractures or other defects in skeletal
c microstructure. Such diseases include chronic renal failure and
c other kidney diseases, osteomalacia, vitamin D deficiency induced
osteopenia or osteoporosis, postmenopausal or senile osteoporosis,
hyperparathyroidism and Paget's disease. The methods can be used for
postmenopausal females, aged individuals and individuals undergoing
dialysis. The loss of bone mass may result from an imbalance in bone
resorption or bone formation, an imbalance of calcium or phosphate
metabolium or phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

PS Disclosure and Claims 25-26; Page 127-129; 160pp; English.
CC Murine osteogenic protein moP2 and proteins having at least 70% CC homology with it are preferred morphogens for inclusion in new morphogen-enriched nutritional formulations. The formulations CC are dietary compositions suitable for people at risk for tissue CC damage due to protein energy malnutrition or to altered metabolism CC function and infant formulations to enhance tissue development in CC an infant or juvenile.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Claim 35-36; Page 115-117; 151pp; English.

Morphogens comprising an amino acid sequence sharing at least Morphogens comprising an amino acid sequence sharing at least 70% homology with Op-1, Op-2, CBMP2, BMP3(fx), Vg1(fx), Vgr(fx), DPP(fx), GDF-1(fx), 60A(fx) and at least 80% homology with BMP5(fx) and BMP6(fx) are useful for maintaining the integrity of the gastrointestinal tract luminal lining in a mammal, including (1) limiting epithelial cell proliferation, (2) inhibiting ulcerative lesion formation, (3) inhibiting inflammation normally associated with ulcerative diseases, and/or (4) stimulating the repair of ulcerative lesions and the regeneration of the luminal tissue.

Sequence 399 AA;
Morphogenic protein soluble complex - for regeneration of t in mammals and diagnosing tissue disorders (Claim 3; Page 75-77; 120pp; English.

This sequence represents the murine derived protein, osteogrotein, mOP-2. The mature OP-2 protein was used as at protein, mOP-2. The mature OP-2 protein of the invention. dimeric protein comprises a pair of protein subunits which associated to give a structure with morphogenic activity. subunit comprises more than 100 amino acids having a patter

Each subunit comprises a mature form of a subunit of a member of the morphogen family, non-covalently complexed with a peptide comprising a pro-region of a morphogenic family member, to form a complex more soluble in aqueous solvents than the uncomplexed subunits. The dimeric protein is useful in a therapeutic composition, pref. also containing a symptom-alleviating co-factor. The protein and corresponding antibody may be used in diagnostic assays, eg. to quantitate the amount of mature and soluble forms of morphogenic
                                                                                                                                                                                                                                                                                                         domain. OP-2 can be expressed from intact or truncated cDNA (T33444) in prokaryotic or eukaryotic host cells. Mature OP-2 and other morphogens (see also W00221-35), partic. human OP-1 (W00221), can be used to induce dentine morphogenesis, to seal dental
                                                                                                                                                                                                                                                                                                                                                                                                      Mouse embryo full-length osteogenic protein OP-2 (W00239) includes a pro-sequence and the morphogenically active mature protein sequence (see also W00224) that includes a 7-Cys C-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mouse osteogenic protein OP-2.

Expression of the presence of epithelial cells which contain a PT cellular gene for morphogenic protein expression

Expression of the presents a mouse osteogenic protein-2 (mop-2). CC op-2 proteins are a group of morphogenically active proteins. Morphogens CC original when reduced, but are active as oxidised homodiners and when contained when reduced the c-terminal worphogenic proteins such as Op-2 play contained to the reduced the compound proteins such as Op-2 play contained and repair in mammals. They induce a developmental contained and repair in mammals. They induce a developmental contained of tissue-specific morphogenesis in a mammal. A novel method is described for screening a candidate compound for the ability to modulate expression of a cellular gene encoding a naturally occurring morphogenic contein. The candidate compound is incubated with epithelial cells which compressed by the cellular gene. A change in the level of the protein cellular gene. A change in the level of the protein compound to modulate expression of the candidate compound is indicative of the ability of the compound to indentify compounds which can increase or decrease morphogen considered production or levels. Such compounds can be used in the treatment of, cerdiovopathy, and cirrhosis of the liver.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Morphogen-induced periodontal tissue regeneration - used in integrating as implanted tooth in tooth socket or to inhibit tissue loss associated with periodontal disease or injury Claim 28-29; Page 100-103; 132pp; English.

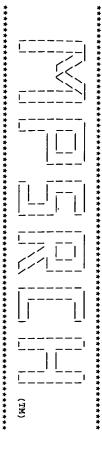

Morphogens comprising an amino acid sequence sharing at least 70% homology with OP-1, OP-2, CBMP2, Vg1(fx), Vgr(fx), DPP(fx), GDF-1(fx), 60A(fx) and at least 80% homology with BMP3(fx), BMP5(fx) and BMP6(fx) are useful for integrating an implanted tooth in a tooth socket and for inhibiting tissue loss associated with periodontal disease or injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Murine OP-2; CBMP2; Vgl(fx); Vgr(fx); DPP(fx); OP-1; OP-2; CBMP2; Vgl(fx); Vgr(fx); DPP(fx); SMP5(fx); BMP5(fx); BMP5(fx); BMP5(fx); SMP5(fx); SMP

                                                                                                                                                                                                                          Morphogen-induced modulation of inflammatory response - and resulting tissue damage, e.g. in autoimmune diseases, diabetes, asthma, ischemia reperfusion injury, etc.
Claim 26; Page 126-127; 165pp; English.
Osteogenic protein (OP)-2 is a preferred morphogen for use in treating tissue damage in e.g. inflammatory disease, autoimmune disease, arthritis, psoriasis, dermatitis, diabetes an emphysema. Proteins having at least 70% homology with OP-2 amino acid sequences can also be used. See R33401 for mature mOP-2. Sequence 399 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB; Q38736.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

*title The mouse proline-rich protein MP6 promoter binds

isoprenaline-inducible parotid nuclear proteins

highly conserved NFkB/rel-like site.
